This is a small FM transceiver for the 2 meter band, that has found a new home in my shack. It appears to date from the late 1970's, so although it wouldn't make a very good boat anchor, hopefully this is a good place to ask...

I'm trying to locate a manual or at least a schematic. Google searching has (unusually) come up with nothing useful. Any ideas?

thanks
Charles

Hi Guys,
I need some help now and maybe some more later..
What is the price (low to high) of a Johnson Desk Kilowatt;
it would be 8 to a 9 as I remember it..

The adapter is in the MK-288 kit

It plugs into the twinax jack & simply grounds one terminal

Just stick center conductor of RG-58 into one terminal, shield soldered
to piece 'o center conductor into other. Ground that shield via
jumper clip to chassis. Of course other end of RG-58 has a BNC to
go into URM-25

Marty-
The 991 is also known as 7AA or more commonly NE-16. You will probably
have more success looking for NE-16.

73,
Chuck N7RHU

Subject: April 1st and Deregulation
Content-Type: text/plain; charset=ISO-8859-1; format=flowed
Content-Transfer-Encoding: 7bit

Washington, DC, April 1, 2008:

In a bold move the Federal Communications Commission has decided to
deregulate the Amateur Radio Service. This comes at a time when budget
cuts within the Commission are forcing its Enforcement Bureau to shut down
by 1 January 2009.

A spokesperson for the Commission stated that since Amateur Radio
operators are supposed to be self-policing that this new move "should not
pose a problem". And that it would also "solve the whole issue of
restructuring".

This news has come as quite a shock to many in the Amateur Radio
community, striking up many heated debates. "Basically we're being told
that we're on our own as of 1 January, 2008", said a high-level League

staff member.

In the interim between 2008 and 2010 Amateur Radio operators are expected to act just as they do now. "Nothing's changed yet, and all the rules and regulations are still in effect," said a spokesperson for the Commission.

All of this is set to change however, starting in 2008. On 1 January 2010 Amateur Radio in the United States will cease to exist as an official radio service. At that time it will be up to the operators to make up their own rules and regulations and to enforce them.

To clarify one other issue, "call signs that have not already been issued will all be available on the 'honor system'," said another Commission spokesperson. The band-plans and power limitations are expected to stay the same.

Look for more information on this late-breaking news story as it becomes available.

Herb W5AN

PS Today is April 1st (I almost bit on this when I received it from an ARRL person;)

Does anyone have the schematic or article on converting a T-22 ARC-5
transmitter to a Q-Fiver.
I picked up a mint unit still in it original packing last Sunday at a
hamfest and want to use it on my Hallicrafters S-40A receiver.
Also interested in the VFO conversions.

Make sure you inject at least 20W from the T-22 into the S-40A IF or
else you get a Q-ten-er. As to the conversion to VFO, well, you take a
BC-453 receiver and

I have a couple of NIB ARC-5 racks you can have, Breck - a triple
receiver and a double transmitter rack. If you hacksaw them apart you
can bolt one section from each together and have a nice basis for an SSB

transceiver - there's a good article on that in QST somewhere, IIRC.
Basically you use the transmitter for a receiver and the receiver for a
transmitter but of course there is a lot of fun modification you have to
do to get them working like that... I think that approach would be
neater than just a Q-5er.

The T22 transmitter is not usable as a Q-5er. You need the 190 to 550khz
receiver.

Well, y'all can hoot and hollar alls ya wants, but I am still trying to
find a schematic for my new to me e-river Henway 2-Lb classic
amplifier. Anybody remember that boatanchor? It was manufactured by
the Snipe Radio Company of Skyhook California in the 60's.

It's been one of them days.

What a terrible time to get this bit of news. Here I am, working
away, trying to calibrate my Audio Grid Dip to NIST standards, and the
FCC is going to eliminate the need for such instrumentation.

Hank

No, this is not an April 1 gag.

As the Gainesville hamfast is come up in a few weeks, I am going thru stuff
and seeing what I might bring.

I have a number of NIB "reactors", date packed looks like '63.

They are marked
Federal Telephone & Radio, 2 Henrys, 8V RMS, 230 C.P.S., 0.130A. DC, 170
ohms max, W.V. 700, "TF 1A 04 YY".

I have dragged these any many other very valuable items around the country
over the course of the last 40 years,
so I sure would hate to part with something I KNOW will come in useful one
of these days.

What was the original application for these beauties, and to what use could they be put today ?

 Chuck, K1OM

Content-Transfer-Encoding: quoted-printable

Wilson,

My Radio Handbook, 15th Edition, in Chapter 17, has a good description =
of phasing exciters and includes three different audio phasing networks. =
 One of them is a "passive" network which then shows up as well in their =
schematics for the SSB Junior and for the Central Electronics 10-A (both =
schematics are shown in the chapter). This "passive network" is =
probably the one that B&W put into their 350-2Q4. Millen also likely =
built it into their 75012, and Central Electronics into their PS-1. I =
can scan several pages from that chapter and send them to you if you are =
interested. =20

Another good reference for this network and how to adjust it can be =
found in "S.S.B. Jr.," G.E. Ham News, Vol 5, No. 6, November-December, =
1950. Someone on the reflector can probably turn up a copy of that for =
us.

Jim, W8KGI

 Subject: Phase Shift Networks

 I have handbooks and have built a successful phasing generator in the =
past, for 50KHz acoustic communication in water, a very interesting =
application, but I'd like any sort of info available on the B&W 350 =
(2Q4) netwoek and its application. There must have been an app note or =
instructions for it, but I haven't seen such and Google didn't turn any =
up.

 BTW, the water application worked great and the sound quality was =
amazing. There was severe multipath distortion in shallow water, but =
that happens to any acoustic system in water.
 Wilson

Breck....

The "Q-Fiver" used a BC-453 receiver, which tuned from 190 to 550 Mhz., to make an improvised double-conversion receiver. You can modify your S-40A receiver to provide an output from the IF section (at 455 Khz.). This signal is fed to the antenna input of the BC-453, which is then tuned to 455 Khz. The BC-453 then provides the 2nd IF, detector, and audio output stages.

The T-22 (BC-459) transmitter can be converted for use as a VFO, with an output from 7 to 9.1 MHz. I have conversion info, if you need it.

73,
Art Lebermann

Breck

There aren't that many "mint" units still available. There ARE however, thousands of hacked on units. I'd suggest preserving the nice , mint one, and finding a cheapie to get the snippers on.

Respectfully
John K5MO
